

POWERKIT™

Increase your Power!

Is your business system missing some functionality that your business requires?

Does current functionality not meet your actual needs?

Now you can provide all the functionality that your business requires, in just the way you want.

Create big productivity gains with simple efforts.

"Easier than doing nothing!"

PowerKit productivity features:

- **ProStar WorkFlow Engine™** increases efficiency and control for your business process
- **TailorPro Developers' ToolKit** provides unsurpassed tools for Non-Invasive Customizations, with a 100% success record meeting every company's needs
- **TailorPro eLite:** screen-driven toolset to develop common customizations with no programming required
- **Audit & Security:** for your SOX and other compliance needs
- **Data Selection and Filtering:** powerful tools for managing business activities and limiting user access and authority
- **Customization Management:** self-documentation and control panel for visibility of all customizations
- **Customize automated batch functions** with QXtend integration
- **Facilitate customization** of third-party applications such as Eagle

INCREASE YOUR POWER

- + Increase your business's productivity and profitability
- + Enhanced tools for Non-Invasive Customizations
- + Implement any new or revised functionality your business requires
- + Solutions fully integrated with your QAD applications

"ProStar PowerKit™" is the evolution of TailorPro, the tried and true system for creating Non-Invasive Customizations, with many significant new capabilities.

- ProStar Workflow Engine™
 - business procedures, roles, rules and training
 - integrated with the QAD™ applications
 - Transaction Automation and Control
- Audit & Security "for all your compliance requirements"
- Unlimited Data Selection and Filtering
 - add new criteria to any function, e.g. Sales Order Allocations with unlimited variables to meet your unique sales program requirements
 - control user authority and access to data based on context and content
- Anchors with context sensitivity for user/group/locale
- Project ID for grouping and managing disparate anchors as a set
- Many new functions in the TailorPro Developers' Toolkit
 - Users state a minimum of 400% productivity improvement over traditional customization methods
- TailorPro eLite: no-programming-required for many customization needs
 - adding new fields anywhere in the business process
 - invoking custom complex logic
 - edit screens, including field default values
 - many other customizations using the screen-driven interface
- Integration with QXtend enables any custom functionality in the user interface to be replicated in automated batch processes
- Customization tools work with Progress-based bar-code applications, Eagle among others
- Non-Invasive Customizations create no hindrance to applying patches, service packs and upgrades of your QAD™ applications

"Get what you need!"
